Chapter 3, solution 5c. the combined heat transfer coefficient represents the combined effects of radiation and convection heat transfers on a surface, and is defined as $h_{combined} = h_{convection} + h_{radiation}$. it offers the convenience of incorporating the effects of radiation in the convection heat transfer coefficient, and to ignore radiation Heat exchangers. for more than 30 years, we have utilized state-of-the-art design and manu-facturing techniques to provide heat transfer solutions for a wide variety of industries. customers' applications range from a single unit for research and development to production quantities for oem equipment. exergy offers a comprehensive product line of
